

VCR Investment Casting is a family owned and operated business and has been in operation for over a decade. Due to our health and age, it is with regret that we have come to the decision to put this part of our business, the precision investment casting operation, on the market for sale.

This is a unique operation that has the ability to grow as there is demand for this type of manufacturing in Australia. Presently we operate in Brisbane, but this can be moved to anywhere as the intellectual property and equipment is for sale.

The Investment Casting process is a popular casting technique, which can produce components from dies made in materials of aluminium, epoxy and 3D printed. The components that are produced are very accurate and detailed and are currently produced in stainless steel, 1030 steel, 4140 tool steel and aluminium.

This is an ideal opportunity to purchase a stand-alone operation with the ability to grow in the future.

If you think this maybe something you are looking for, please contact us and we can discuss this in more detail with you.

Yours Sincerely

Glenn and Rosemary Smith
